

Customer Feedback Analysis

Customer Feedback Analysis Report - Q2 2026 Executive Summary Customer satisfaction trends during Q2 2026 revealed noticeable regional variations across business operations. The West region experienced a decline in customer retention due to shipping delays, inconsistent inventory availability, and increased product return rates. Customer service ticket volume increased by 21% compared to the previous quarter. Customer sentiment analysis identified delivery transparency and delayed fulfillment as the primary causes of dissatisfaction. Surveys indicated that customers expected faster delivery timelines and improved communication regarding stock availability. Regional Customer Trends The East region demonstrated strong customer engagement and improved repeat purchase rates after targeted marketing campaigns. Customers in the North region reported stable satisfaction levels due to reliable delivery operations and consistent product availability. However, western customers reported multiple operational frustrations including: - delayed deliveries - order cancellations - inconsistent inventory updates - poor delivery tracking visibility - longer support response times Product Return Analysis Product return rates increased significantly for electronics and consumer goods. Internal analysis suggested that delayed shipments contributed to order cancellations and refund requests. Top reasons for product returns included: - delayed delivery - damaged packaging - incorrect product shipments - inventory substitution issues - customer dissatisfaction with delivery timelines Customer Support Metrics Customer support teams observed rising ticket volume related to: - delivery delays - stock unavailability - refund processing - shipment tracking issues Average ticket resolution time increased by 14% due to operational bottlenecks in western distribution centers. Strategic Recommendations Recommended actions include: - improving delivery communication systems - increasing inventory visibility - expanding warehouse capacity - improving shipment tracking systems - strengthening customer retention campaigns Conclusion Improving customer experience and operational transparency will be essential for restoring customer retention and strengthening regional performance over the next two quarters.
